Tip:
Instead of using the mouse to control JakPod, you can also use your keyboard to quickly access most features. Shortcuts are available for all options in the "File" and "Action" menus (see lower part of the JakPod window for key combinations and their meaning). Switching between iPods can be done using ALT+F1 (left window) and ALT+F2 (right window). Selecting tracks (or even complete subtrees in the directory structure) can be done using the space bar.
